

10 — User Experience Architecture

Purpose

The purpose of this document is to define the User Experience Architecture of Mosaica.

This module establishes the principles and structures that guide how Users interact with the system.

The User Experience Architecture defines how Mosaica transforms its capabilities into an understandable, efficient and meaningful User experience.

UX Architecture Scope

This module defines:

- user experience principles,
- navigation structure,
- user flows,
- interface organization,
- interaction patterns.

The purpose is not to define individual visual designs, but to establish the experience framework that guides interface decisions.

UX Architecture Position

User Experience Architecture connects User needs with system capabilities.

User Need

↓

User Experience Design

↓

Interface

↓

Application Capability

UX Responsibilities

User Understanding

Responsible for ensuring that the system reflects real User goals.

Information Organization

Responsible for presenting information in a meaningful structure.

Interaction Design

Responsible for defining how Users perform actions.

Experience Consistency

Responsible for maintaining predictable behavior throughout the application.

UX Architecture Principles

Principle 1 — User Goal First

The system shall be designed around User goals rather than internal technical structures.

Principle 2 — Clarity Over Complexity

The interface shall prioritize understandable interactions.

The User should not need to understand the underlying architecture to use Mosaica.

Principle 3 — Progressive Complexity

Advanced capabilities should become available gradually.

The system should not overwhelm Users with unnecessary complexity.

Principle 4 — Consistent Experience

Similar actions should behave similarly throughout the application.

Principle 5 — Information Before Decoration

The organization and meaning of information have priority over visual elements.

UX Architecture Context

Mosaica is primarily a personal cultural archive system.

The User experience is built around:

Discover

↓

Evaluate

↓

Collect

↓

Organize

↓

Remember

Core User Experience Areas

Mosaica experience is divided into major areas:

User Experience

└─ Discovery

- └─ Library Management
 - └─ Personal Organization
 - └─ Content Interaction
 - └─ Personal Reflection
-

Discovery Experience

Purpose

Allows Users to explore cultural content.

Examples

- finding Content,
 - exploring People,
 - discovering related works.
-

Library Experience

Purpose

Allows Users to manage their personal archive.

Examples

- adding Content,
 - tracking status,
 - recording personal experience.
-

Organization Experience

Purpose

Allows Users to create personal structures.

Examples

- Collections,
 - Tags,
 - personal categorization.
-

Reflection Experience

Purpose

Preserves the User's relationship with cultural content.

Examples

- ratings,
 - notes,
 - history,
 - personal records.
-

UX Evolution Strategy

Mosaica UX shall evolve gradually.

Foundation

↓

Improvement

↓

Personalization

↓

Advanced Experience

Foundation Phase

Focus:

- clear navigation,
 - understandable actions,
 - reliable workflows.
-

Improvement Phase

Focus:

- usability improvements,
 - workflow optimization,
 - better information presentation.
-

Advanced Experience Phase

Focus:

- personalization,
 - recommendations,
 - intelligent assistance.
-

Module Structure

10 User Experience Architecture

10.01 UX Principles

10.02 Navigation Structure

10.03 User Flow Design

10.04 Interface Architecture

10.05 UX Architecture Review

Architectural Decisions Introduced

Decision 01

User experience shall be designed around User goals.

Decision 02

Interface complexity shall not expose unnecessary system complexity.

Decision 03

Information organization is a primary UX responsibility.

Decision 04

The User's personal relationship with Content is a core experience element.

Decision 05

UX complexity shall grow according to validated User needs.

10.01 — UX Principles

Purpose

The purpose of this section is to define the fundamental User Experience principles that guide the design and evolution of Mosaica.

These principles establish how Users interact with the system and ensure that the experience remains:

- clear,
- meaningful,
- consistent,
- user-centered.

All UX decisions shall be evaluated according to these principles.

UX Principles

Principle 1 — User Goals Over System Structure

Definition

Mosaica shall be designed around what Users want to achieve, not around internal technical structures.

Application

The User should think in terms of:

- discovering Content,
- building a Library,
- organizing personal knowledge,
- recording experiences.

The User should not need to understand:

- database entities,
 - API structures,
 - system modules.
-

Principle 2 — Personal Archive First

Definition

Mosaica's primary experience shall focus on the User's personal relationship with cultural content.

Application

The system should prioritize:

- personal Library,
- personal evaluations,
- personal notes,
- personal history.

Shared information supports the experience but does not replace the personal archive.

Principle 3 — Reduce Cognitive Load

Definition

The interface shall minimize unnecessary mental effort.

Application

Mosaica should avoid:

- overwhelming information,
 - unnecessary choices,
 - complex workflows.
-

Goal

The User should understand:

- where they are,
 - what they can do,
 - what happens next.
-

Principle 4 — Progressive Disclosure

Definition

Information and advanced features should be revealed according to User needs.

Application

Basic actions should remain simple.

Advanced capabilities should become available when useful.

Example

New User:

Find Content

↓

Add to Library

↓

Track Progress

Experienced User:

Collections

↓

Tags

↓

Advanced Organization

↓

Personal Analysis

Principle 5 — Consistent Interaction

Definition

Similar actions should behave similarly throughout Mosaica.

Application

Examples:

Adding something:

Content

↓

Library

↓

Collection

should follow recognizable patterns.

Principle 6 — Information Hierarchy

Definition

Information shall be presented according to importance.

Application

Primary information:

- Title,
- Type,
- Status,
- Personal relationship.

Secondary information:

- detailed metadata,
 - additional context,
 - related information.
-

Principle 7 — Discovery and Reflection Balance

Definition

Mosaica should support both discovering new content and reflecting on past experiences.

Discovery Side

Examples:

- finding new works,
- exploring related content,
- learning connections.

Reflection Side

Examples:

- remembering consumed works,
- reviewing notes,
- seeing personal history.

Principle 8 — User Ownership and Control

Definition

Users should feel that their archive belongs to them.

Application

Users should control:

- organization,
- evaluation,
- personal records,
- categorization.

Principle 9 — Meaning Over Data Collection

Definition

Mosaica should not simply collect information.

It should transform information into meaningful personal knowledge.

Application

A Library Entry is not only:

Content + Status

It represents:

Content

+

Personal Experience

+

Memory

+

Meaning

Principle 10 — Simplicity With Depth

Definition

Mosaica should be simple to start using but deep enough for long-term users.

Application

Beginning:

Search

↓

Add

↓

Track

Advanced:

Organize

↓

Analyze

↓

Connect

↓

Reflect

UX Decision Model

UX Decision

↓

Does it help User goals?

↓

Does it reduce confusion?

↓

Does it preserve simplicity?

↓

Approve

UX Experience Model

Mosaica Experience

|

Architectural Decisions Confirmed

Decision 01

UX decisions are based on User goals, not technical structures.

Decision 02

Personal archive experience is the center of Mosaica UX.

Decision 03

Complexity shall be introduced gradually.

Decision 04

Information presentation shall follow User importance.

Decision 05

Mosaica should create meaning, not only store data.

10.02 — Navigation Structure

Purpose

The purpose of this section is to define the navigation architecture of Mosaica.

This section establishes how Users move through the system and how major information areas are organized.

The objective is to create a navigation structure that is:

- understandable,
 - predictable,
 - scalable,
 - aligned with User goals.
-

Navigation Principles

Principle 1 — Goal-Oriented Navigation

Definition

Navigation shall be organized around User goals rather than internal system modules.

Application

Users should navigate according to actions such as:

- discovering Content,
 - managing their Library,
 - organizing their archive,
 - exploring personal history.
-

Principle 2 — Clear Information Hierarchy

Definition

The navigation structure shall clearly separate primary and secondary areas.

Application

Primary areas should always remain easy to access.

Secondary functions should not compete with core experiences.

Principle 3 — Consistent Location Awareness

Definition

Users should always understand where they are inside Mosaica.

Application

The interface should communicate:

- current location,
 - available actions,
 - relationship with previous sections.
-

Principle 4 — Minimal Navigation Complexity

Definition

Navigation should remain simple while supporting future growth.

Application

Avoid:

- excessive menu items,
- deep navigation chains,
- unnecessary categories.

Primary Navigation Model

Mosaica's primary navigation consists of core user experiences.

Mosaica Navigation

└─ Home
└─ Discover
└─ Library
└─ Collections
└─ Profile

Home

Purpose

Provides the User's central overview.

Responsibilities

May include:

- recent activity,
 - personal highlights,
 - quick access points,
 - recommendations.
-

Discover

Purpose

Supports exploration of cultural content.

Responsibilities

Allows Users to:

- search Content,
 - explore related information,
 - discover new works.
-

Relationship

Discover connects shared information with personal archive actions.

Discover Content

↓

Add to Library

↓

Personal Experience

Library

Purpose

Represents the User's personal archive.

Responsibilities

Allows Users to:

- view owned entries,
 - track progress,
 - update personal status,
 - access personal records.
-

Importance

Library is the central personal experience of Mosaica.

Collections

Purpose

Provides personal organization capabilities.

Responsibilities

Allows Users to:

- group items,
 - create personal structures,
 - organize knowledge.
-

Profile

Purpose

Represents User identity and preferences.

Responsibilities

May include:

- account settings,
 - preferences,
 - personal configuration.
-

Navigation Relationship Model

Content Navigation Model

A User typically follows this journey:

Discover Content

View Details

Add To Library

Manage Personal Experience

Library Navigation Model

Library

Library Entry

Personal Details

↓

History / Notes / Evaluation

Navigation Depth Rules

Mosaica should avoid excessive navigation depth.

Preferred:

Section

↓

Item

↓

Action

Avoid:

Section

↓

Category

↓

Subcategory

↓

Subcategory

↓

Item

↓

Action

Future Navigation Expansion

Future modules may be introduced when justified.

Possible examples:

- Recommendations,

- Community,
- Analytics,
- AI Assistant.

However, new navigation areas require evaluation against UX principles.

Architectural Decisions Confirmed

Decision 01

Navigation follows User goals instead of internal architecture.

Decision 02

Library remains the central personal experience area.

Decision 03

Discovery connects shared Content with personal archive actions.

Decision 04

Navigation complexity should remain controlled.

Decision 05

New navigation areas require UX evaluation before introduction.

10.03 — User Flow Design

Purpose

The purpose of this section is to define the primary User flows within Mosaica.

This section establishes how Users complete important tasks and interact with the system.

The objective is to create User experiences that are:

- understandable,
 - efficient,
 - consistent,
 - aligned with Mosaica's purpose.
-

User Flow Principles

Principle 1 — User Intent Drives Flow

Definition

Every User flow shall begin with a clear User intention.

Application

Flows should answer:

- What does the User want to achieve?
 - Why is the User performing this action?
 - What is the expected outcome?
-

Principle 2 — Minimize Unnecessary Steps

Definition

User flows should contain only necessary actions.

Application

Avoid:

User Goal

↓

Many unnecessary screens

↓

Final Action

Prefer:

User Goal

↓

Essential Steps

↓

Successful Outcome

Principle 3 — Provide Clear Feedback

Definition

Users should understand the result of their actions.

Application

After important actions, Mosaica should communicate:

- success,
 - failure,
 - next possible action.
-

Principle 4 — Preserve User Context

Definition

Flows should maintain the User's relationship with the information they are interacting with.

Example

A User discovering a film should not lose context when adding it to the Library.

Core User Flows

Mosaica's primary flows are:

User Flows

- └─ Discover Content Flow
 - └─ Library Management Flow
 - └─ Personal Organization Flow
 - └─ Experience Recording Flow
 - └─ Reflection Flow
-

1. Discover Content Flow

Purpose

Allows Users to discover and understand cultural Content.

Flow

User Searches Content

↓

Views Content Information

↓

Explores Related Information

↓

Decides Next Action

Possible Outcomes

User may:

- add Content to Library,
- continue exploring,
- save for later.

2. Library Management Flow

Purpose

Allows Users to create and manage personal archive entries.

Flow

Discover Content

↓

Add To Library

↓

Create Library Entry

↓

Manage Personal Status

Possible Actions

User can:

- mark status,
- add evaluation,
- create notes,
- organize content.

3. Personal Organization Flow

Purpose

Allows Users to structure their personal archive.

Flow

Open Library

↓

Select Content

↓

Assign Collection / Tag

↓

Create Personal Structure

Goal

Transform a collection of items into organized personal knowledge.

4. Experience Recording Flow

Purpose

Allows Users to record their relationship with Content.

Flow

Complete Experience

↓

Open Library Entry

↓

Add Personal Information

↓

Save Experience

Examples

User records:

- rating,
- thoughts,
- completion date,
- personal notes.

5. Reflection Flow

Purpose

Allows Users to revisit their cultural history.

Flow

Open Personal Archive

↓

Review Past Experiences

↓

Explore Personal Patterns

↓

Rediscover Content

Primary Mosaica Experience Loop

The core experience follows this cycle:

Discover

↓

Collect

↓

Experience

↓

Record

Reflect

Discover Again

User Flow Relationship With Architecture

User Action

UX Flow

Application Use Case

Domain Operation

Data Change

Flow Error Handling Principles

User flows should consider unsuccessful situations.

Examples:

Content Not Found

Response:

- explain situation,
 - suggest alternatives,
 - preserve User context.
-

Invalid Action

Response:

- explain why action failed,
 - prevent invalid state,
 - guide User.
-

Connection Problem

Response:

- inform User,
 - preserve entered information when possible.
-

Future Flow Expansion

Future capabilities may introduce additional flows:

Examples:

- AI-assisted discovery,
- recommendations,
- social sharing,
- collaborative collections.

New flows require evaluation according to UX principles.

Architectural Decisions Confirmed

Decision 01

User flows begin with User intentions.

Decision 02

Core experience follows:

Discover → Collect → Experience → Record → Reflect

Decision 03

User flows preserve context between actions.

Decision 04

Important actions provide clear feedback.

Decision 05

New features require UX flow evaluation.

10.04 — Interface Architecture

Purpose

The purpose of this section is to define the interface architecture of Mosaica.

This section establishes how information, interactions and system capabilities are presented to Users.

The objective is to create an interface structure that is:

- clear,
 - consistent,
 - adaptable,
 - aligned with User goals.
-

Interface Architecture Principles

Principle 1 — Information Hierarchy First

Definition

The interface shall present information according to User importance.

Application

Information should be organized into:

Primary Information

↓

Secondary Information

↓

Additional Details

Example

Content Detail Page:

Primary:

- Title
- Type
- Main identity information
- User relationship

Secondary:

- Description
 - Related Content
 - Additional metadata
-

Principle 2 — Interface Reflects User Intent

Definition

Screens and components shall represent User goals rather than database structures.

Example

Incorrect:

Correct:

Principle 3 — Consistent Component Behavior

Definition

Similar interface elements should behave consistently throughout Mosaica.

Application

Examples:

- buttons with similar purposes behave similarly,
 - cards follow consistent patterns,
 - navigation remains predictable.
-

Principle 4 — Progressive Information Display

Definition

The interface should reveal complexity gradually.

Application

A Content page may begin with:

Title

↓

Basic Information

↓

Personal Actions

↓

Detailed Information

Principle 5 — Personal Context Visibility

Definition

The interface should clearly show the User's relationship with Content.

Application

A Content item should distinguish:

Shared Information:

Movie Title

Director

Genre

from:

Personal Information:

My Status

My Rating

My Notes

Interface Architecture Model

Mosaica interface is structured into four main areas:

Interface Architecture

├─ Navigation Layer

├─ Discovery Layer

├─ Personal Archive Layer

1. Navigation Layer

Purpose

Provides movement between major experiences.

Responsibilities

Contains:

- main navigation,
 - current location awareness,
 - access to core areas.
-

2. Discovery Layer

Purpose

Presents shared cultural information.

Responsibilities

Supports:

- searching,
 - exploring,
 - viewing Content details.
-

Example Structure

Search

↓

Results

↓

Content Detail

↓

Personal Action

3. Personal Archive Layer

Purpose

Represents the User's personal cultural memory.

Responsibilities

Supports:

- Library management,
 - Collections,
 - Personal notes,
 - Evaluations.
-

Importance

This is the central personalized area of Mosaica.

4. Interaction Layer

Purpose

Allows Users to perform actions.

Examples

Actions:

- Add to Library

- Change Status
- Create Collection
- Add Note

Screen Architecture Model

A typical Mosaica screen follows this structure:

Screen

Component Principles

Component Responsibility

Each interface component should have a clear purpose.

Reusability

Reusable components should be created when they provide consistent value.

Avoid Over-Abstraction

Not every visual similarity requires a shared component.

Responsive Design Principle

Definition

The interface should adapt to different device contexts.

Considerations

Future interfaces may support:

- desktop,
 - mobile,
 - tablet.
-

Accessibility Principle

Definition

Mosaica should aim to remain usable by a wide range of Users.

Considerations

Future implementations should consider:

- readable content,
 - clear interactions,
 - understandable navigation.
-

Interface Evolution Strategy

Mosaica interface evolves through stages:

Functional Interface

↓

Improved Experience

↓

Personalized Interface

↓

Intelligent Experience

Functional Interface

Focus:

- completing core tasks.
-

Improved Experience

Focus:

- usability,
 - organization,
 - visual refinement.
-

Personalized Interface

Focus:

- User preferences,
 - customized experiences.
-

Intelligent Experience

Focus:

- AI assistance,
 - recommendations,
 - adaptive interactions.
-

Architectural Decisions Confirmed

Decision 01

Interface structure follows User goals, not technical models.

Decision 02

Personal context is a central interface element.

Decision 03

Information hierarchy guides screen organization.

Decision 04

Interface complexity grows progressively.

Decision 05

Reusable components require clear value.

10.05 — UX Architecture Review

Review Objective

The purpose of this Architecture Review is to validate that the Mosaica User Experience Architecture provides a clear, meaningful and scalable foundation for User interaction.

This review confirms that UX decisions preserve:

- User-centered design,
 - information clarity,
 - personal archive focus,
 - consistent interaction,
 - future evolution capability.
-

Scope Reviewed

The following UX architecture components have been reviewed:

- UX Principles
 - Navigation Structure
 - User Flow Design
 - Interface Architecture
-

Validation Results

User Goal Alignment

Status: Approved

The UX Architecture correctly prioritizes User goals over internal system structures.

Confirmed:

Users interact with Mosaica through meaningful actions:

- Discover,
- Collect,
- Experience,
- Record,
- Reflect.

The interface does not expose unnecessary technical complexity.

Personal Archive Experience

Status: Approved

The User's personal relationship with Content remains the central experience.

Confirmed:

Shared information and personal experience remain separate.

Shared Content Information

+

Navigation Structure

Status: Approved

The navigation structure provides clear access to core User experiences.

Confirmed primary areas:

Home

Discover

Library

Collections

Profile

The structure avoids unnecessary navigation complexity.

User Flow Design

Status: Approved

Core User flows correctly represent Mosaica's intended experience.

Confirmed primary loop:

Discover

↓

Collect

↓

Experience

↓

Record

↓

Reflect

Interface Architecture

Status: Approved

The interface architecture correctly organizes information according to User importance.

Confirmed:

Primary Information

↓

Secondary Information

↓

Additional Details

Information Separation

Status: Approved

The interface preserves the distinction between:

Shared Information

Examples:

- Content details,
- People,
- Genres,
- Related works.

Personal Information

Examples:

- Status,
 - Rating,
 - Notes,
 - Personal history.
-

UX Complexity Management

Status: Approved

The UX approach follows progressive complexity.

Confirmed:

Initial experience remains simple.

Advanced capabilities can be introduced gradually.

Future Expansion Compatibility

Status: Approved

The UX Architecture supports future capabilities without requiring redesign.

Possible future expansions:

- AI assistance,
- recommendations,
- advanced analytics,
- social features.

These require separate UX evaluation.

Architectural Decisions Confirmed

Decision 01

UX decisions shall be based on User goals.

Decision 02

Mosaica's core experience is the personal cultural archive.

Decision 03

Discovery and reflection are both essential parts of the experience.

Decision 04

Interface complexity shall grow gradually.

Decision 05

New UX capabilities require evaluation against existing principles.

UX Architecture Summary

Review Conclusion

The Mosaica User Experience Architecture is considered architecturally complete.

The current design provides:

- a clear User journey,
- meaningful interaction patterns,
- scalable experience principles,
- alignment with the personal archive vision.

No blocking UX architecture issues have been identified.
